Subject Index of Volume 10

Absorption spectra
absorption spectra of viral components of Sendai virus in the wavelength region from 130 to 320 nm, 79
Aged lens proteins
photophysics and photobiology of the eye, 23
Animals
photomodulation of enzymes, 3
Antioxidant
electron paramagnetic resonance study of the influence of spermine on the photophysical reactions of tryptophan in aqueous solution at 77–200 K, 353

Bacteria
photomodulation of enzymes, 3
Bacteriochlorophyll-*a*,
bacteriochlorophyll-*a* as photosensitizer for photodynamic treatment of transplantable murine tumors, 303
Bacteriopheophytin-*a*
bacteriochlorophyll-*a* as photosensitizer for photodynamic treatment of transplantable murine tumors, 303

Calcium ions
effect of calcium ions on psoralen-sensitized photohaemolysis, 159
Candida guilliermondii
near-UV activation of yeast growth, 51
Chlorpromazine
photobinding of 8-methoxypsoralen 4,6,4′-trimethylangelicin and chlorpromazine to Wistar rat epidermal biomacromolecules *in vivo*, 257

Diflunisal photochemistry
molecular mechanism of drug photosensitization. Part 3. Photohaemolysis sensitized by diflunisal, 221
Dimer excision
uvrB-dependent, *recF*-independent post-replication (or replication) repair in *Escherichia coli*, 329
Dipeptides
effect of the peptide bond on the singlet-molecular-oxygen-mediated sensitized photo-oxidation of tyrosine and tryptophan dipeptides. A kinetic study, 57
DNA
helium–neon laser irradiation of rat liver mitochondria gives rise to a new subpopulation of mitochondria: isolation and first biochemical characterization, 71
Drugs
systemic phototoxicity of drugs and other xenobiotics, 183

Electric light scattering
electric parameters of photosystem II particles – electric light scattering study, 315
Electron ejection
electron paramagnetic resonance study of the influence of spermine on the photophysical reactions of tryptophan in aqueous solution at 77–200 K, 353
Electrophoretic mobility
electric parameters of photosystem II particles – electric light scattering study, 315
Endothelial cells
mechanisms of photosensitivity in porphyric patients with special emphasis on erythropoietic protoporphyria, 285
Enzymatic synthesis
near-UV activation of yeast growth, 51
Enzymes
helium–neon laser irradiation of rat liver mitochondria gives rise to a new subpopulation of mitochondria: isolation and first biochemical characterization, 71
photomodulation of enzymes, 3
Erythrocytes
mechanisms of photosensitivity in porphyric patients with special emphasis on erythropoietic protoporphyria, 285

Extrinsic proteins
electric parameters of photosystem II particles – electric light scattering study, 315

Flash spectroscopy
photophysics and photochemistry of new verdin compounds, 345
Flavins
on the reaction mechanism of flavin-sensitized photoregulation of *Monoraphidium braunii* nitrate reductase, 211
Free radicals
electron paramagnetic resonance study of the influence of spermine on the photophysical reactions of tryptophan in aqueous solution at 77–200 K, 353

Genes
photomodulation of enzymes, 3
Genotoxicity
systemic phototoxicity of drugs and other xenobiotics, 183
Green algae
on the reaction mechanism of flavin-sensitized photoregulation of *Monoraphidium braunii* nitrate reductase, 211

Haematoporphyrin
solvents effects in the photodegradation and reactivity of the various ionic forms of haematoporphyrin, 147
Haematoporphyrin derivative
photosensitization of L1210 leukaemic cells by argon laser irradiation after incubation with haematoporphyrin derivative and rhodamine 123, 119
Hairless mice
influence of dose rate on ultraviolet tumorigenesis, 41
He–Ne laser
helium–neon laser irradiation of rat liver mitochondria gives rise to a new subpopulation of mitochondria: isolation and first biochemical characterization, 71
Hepatotoxicity
systemic phototoxicity of drugs and other xenobiotics, 183
Human fibroblast cells
concentration and fluence dependence of the disturbance of the membrane integrity of human fibroblasts by the photodynamic action of Photosan III, 111

Isolation
helium–neon laser irradiation of rat liver mitochondria gives rise to a new subpopulation of mitochondria: isolation and first biochemical characterization, 71

Laser flash photolysis
chromophore loss of uracil derivatives and polyuridylic acid in aqueous solution caused by 248 nm laser pulses and continuous UV irradiation: mechanism of the photohydration of pyrimidines, 91
Laser irradiation
biochemical effects of helium–neon laser irradiation in the rat brain, 271
Light–eye interactions
photophysics and photobiology of the eye, 23
Lipoproteins
mechanisms of photosensitivity in porphyric patients with special emphasis on erythropoietic protoporphyria, 285
Liposomes
laser picosecond microspectrofluorometry of haematoporphyrin in cells and liposomes, 239
Low intensity irradiation
comparison of the effects of visible femtosecond laser pulses and continuous wave laser radiation of low average intensity on the clonogenicity of *Escherichia coli*, 339

Macrophage
activation of macrophages by Photofrin II during photodynamic therapy, 133
8-Methoxypsoralen
photobinding of 8-methoxypsoralen 4,6,4′-trimethylangelicin and chlorpromazine to Wistar rat epidermal biomacromolecules *in vivo*, 257
Membrane integrity
concentration and fluence dependence of the disturbance of the membrane integrity of human fibroblasts by the

photo-dynamic action of Photosan III, 111
Mitochondria
helium–neon laser irradiation of rat liver mitochondria gives rise to a new subpopulation of mitochondria: isolation and first biochemical characterization, 71
Monoraphidium braunii
on the reaction mechanism of flavin-sensitized photoregulation of *Monoraphidium braunii* nitrate reductase, 211

Near-UV radiation
near-UV activation of yeast growth, 51
Neurotoxicity
systemic photoxicity of drugs and other xenobiotics, 183
Nitrate reductase
on the reaction mechanism of flavin-sensitized photoregulation of *Monoraphidium braunii* nitrate reductase, 211
Nitroblue tetrazolium reduction
activation of macrophages by Photofrin II during photodynamic therapy, 133

Photo-oxidation
effect of the peptide bond on the singlet-molecular-oxygen-mediated sensitized photo-oxidation of tyrosine and tryptophan dipeptides. A kinetic study, 57
solvents effects in the photodegradation and reactivity of the various ionic forms of haematoporphyrin, 147
Photoactivation
comparison of the effects of visible femtosecond laser pulses and continuous wave laser radiation of low average intensity on the clonogenicity of *Escherichia coli*, 339
near-UV activation of yeast growth, 51
Photoaging
photophysics and photobiology of the eye, 23
Photobinding
photobinding of 8-methoxypsoralen 4,6,4′-trimethylangelicin and chlorpromazine to Wistar rat epidermal biomacromolecules *in vivo*, 257
Photobleaching
solvents effects in the photodegradation and reactivity of the various ionic forms of haematoporphyrin, 147
Photodamage
photophysics and photobiology of the eye, 23
Photodynamic action
concentration and fluence dependence of the disturbance of the membrane integrity of human fibroblasts by the photodynamic action of Photosan III, 111
phototoxic potential of quinolones, 249
Photodynamic therapy
activation of macrophages by Photofrin II during photodynamic therapy, 35
bacteriochlorophyll-*a* as photosensitizer for photodynamic treatment of transplantable murine tumors, 303
photosensitization of L1210 leukaemic cells by argon laser irradiation after incubation with haematoporphyrin derivative and rhodamine 123, 119
solvents effects in the photodegradation and reactivity of the various ionic forms of haematoporphyrin, 147
Photofrin II
activation of macrophages by Photofrin II during photodynamic therapy, 133
Photohaemolysis
effect of calcium ions on psoralen-sensitized photohaemolysis, 159
molecular mechanism of drug photosensitization. Part 3. Photohaemolysis sensitized by diflunisal, 221
phototoxic potential of quinolones, 249
Photohydrate
chromophore loss of uracil derivatives and polyuridylic acid in aqueous solution caused by 248 nm laser pulses and continuous UV irradiation: mechanism of the photohydration of pyrimidines, 91
Photomodulation
photomodulation of enzymes, 3
Photomovement
parametrical principle of the classification of photomovement of organisms, 269
Photophoresis
photophoresis: present and future aspects, 165

Photoprotection
photophysics and photobiology of the eye, 23
Photosan III
concentration and fluence dependence of the disturbance of the membrane integrity of human fibroblasts by the photodynamic action of Photosan III, 111
Photosensitivity
mechanisms of photosensitivity in porphyric patients with special emphasis on erythropoietic protoporphyria, 285
Photosensitization
molecular mechanism of drug photosensitization. Part 3. Photohaemolysis sensitized by diflunisal, 221
Photosystem II particles
electric parameters of photosystem II particles — electric light scattering study, 315
Phototherapy
photophysics and photochemistry of new verdin compounds, 345
Photothermal effects
comparison of the effects of visible femtosecond laser pulses and continuous wave laser radiation of low average intensity on the clonogenicity of *Escherichia coli*, 339
Phototoxicity
systemic phototoxicity of drugs and other xenobiotics, 183
phototoxic potential of quinolones, 249
Plants
photomodulation of enzymes, 3
Poly(U)
chromophore loss of uracil derivatives and polyuridylic acid in aqueous solution caused by 248 nm laser pulses and continuous UV irradiation: mechanism of the photohydration of pyrimidines, 91
Porphyrias
mechanisms of photosensitivity in porphyric patients with special emphasis on erythropoietic protoporphyria, 285
Porphyrins
laser picosecond microspectrofluorometry of haematoporphyrin in cells and liposomes, 239
mechanisms of photosensitivity in porphyric patients with special emphasis on erythropoietic protoporphyria, 285
Post-replication repair
uvrB-dependent, *recF*-independent post-replication (or replication) repair in *Escherichia coli*, 329
Psoralen
effect of calcium ions on psoralen-sensitized photohaemolysis, 159
Pulsed irradiation
comparison of the effects of visible femtosecond laser pulses and continuous wave laser radiation of low average intensity on the clonogenicity of *Escherichia coli*, 339
PUVA
photobinding of 8-methoxypsoralen 4,6,4′-trimethylangelicin and chlorpromazine to Wistar rat epidermal biomacromolecules *in vivo*, 257

Quenching kinetics
effect of the peptide bond on the singlet-molecular-oxygen-mediated sensitized photo-oxidation of tyrosine and tryptophan dipeptides. A kinetic study, 57
Quinolones
phototoxic potential of quinolones, 249

Rat
biochemical effects of helium–neon laser irradiation in the rat brain, 271
photobinding of 8-methoxypsoralen 4,6,4′-trimethylangelicin and chlorpromazine to Wistar rat epidermal biomacromolecules *in vivo*, 257
recF cells
uvrB-dependent, *recF*-independent post-replication (or replication) repair in *Escherichia coli*, 329
Redox photoregulation
on the reaction mechanism of flavin-sensitized photoregulation of *Monoraphidium braunii* nitrate reductase, 211
Rhodamine 123
photosensitization of L1210 leukaemic cells by argon laser irradiation after

incubation with haematoporphyrin derivative and rhodamine 123, 119
RNA
helium–neon laser irradiation of rat liver mitochondria gives rise to a new subpopulation of mitochondria: isolation and first biochemical characterization, 71

Sendai virus
absorption spectra of viral components of Sendai virus in the wavelength region from 130 to 320 nm, 79
Serotonin
near-UV activation of yeast growth, 51
Singlet molecular oxygen
effect of the peptide bond on the singlet-molecular-oxygen-mediated sensitized photo-oxidation of tyrosine and tryptophan dipeptides. A kinetic study, 57
Singlet oxygen
photophysics and photochemistry of new verdin compounds, 345
photosensitization of L1210 leukaemic cells by argon laser irradiation after incubation with haematoporphyrin derivative and rhodamine 123, 119
phototoxic potential of quinolones, 249
solvents effects in the photodegradation and reactivity of the various ionic forms of haematoporphyrin, 147
Spermine
electron paramagnetic resonance study of the influence of spermine on the photophysical reactions of tryptophan in aqueous solution at 77–200 K, 353
Superoxide anion
activation of macrophages by Photofrin II during photodynamic therapy, 133
Synchrotron radiation
absorption spectra of viral components of Sendai virus in the wavelength region from 130 to 320 nm, 79

Time-resolved fluorescence microscopy
laser picosecond microspectrofluorometry of haematoporphyrin in cells and liposomes, 239
Transplantable mouse tumor photosensitization
bacteriochlorophyll-*a* as photosensitizer for photodynamic treatment of transplantable murine tumors, 303
4,6,4′-Trimethylangelicin
photobinding of 8-methoxypsoralen 4,6,4′-trimethylangelicin and chlorpromazine to Wistar rat epidermal biomacromolecules *in vivo*, 257
Triplet states
photophysics and photochemistry of new verdin compounds, 345
Tryptophan
electron paramagnetic resonance study of the influence of spermine on the photophysical reactions of tryptophan in aqueous solution at 77–200 K, 353
effect of the peptide bond on the singlet-molecular-oxygen-mediated sensitized photo-oxidation of tyrosine and tryptophan dipeptides. A kinetic study, 57
Tumorigenesis
influence of dose rate on ultraviolet tumorigenesis, 41
Tyrosine
effect of the peptide bond on the singlet-molecular-oxygen-mediated sensitized photo-oxidation of tyrosine and tryptophan dipeptides. A kinetic study, 57

Uracil
chromophore loss of uracil derivatives and polyuridylic acid in aqueous solution caused by 248 nm laser pulses and continuous UV irradiation: mechanism of the photohydration of pyrimidines, 91
UV carcinogenicity
influence of dose rate on ultraviolet tumorigenesis, 41
UV irradiation
chromophore loss of uracil derivatives and polyuridylic acid in aqueous solution caused by 248 nm laser pulses and continuous UV irradiation: mechanism of the photohydration of pyrimidines, 91

UVB
influence of dose rate on ultraviolet tumorigenesis, 41
uvrB cells
uvrB-dependent, *recF*-independent post-replication (or replication) repair in *Escherichia coli*, 329

Vacuum-UV region
absorption spectra of viral components of Sendai virus in the wavelength region from 130 to 320 nm, 79
Verdins
photophysics and photochemistry of new verdin compounds, 345
Viral components
absorption spectra of viral components of Sendai virus in the wavelength region from 130 to 320 nm, 79

Xenobiotics
systemic phototoxicity of drugs and other xenobiotics, 183

Yeast cells
near-UV activation of yeast growth, 51
